## EXTERIOR LIGHTING TRENDS

Homeowners are spending more time outdoors and want to extend the comforts of their indoor space to the outside areas of their home such as a backyard, patio or deck. The ambience of a beautiful outdoor living area can quickly be ruined with harsh lighting or not enough lighting.

Task lighting near a grill or an outdoor kitchen area is essential during the evening hours. Also, general lighting near the main seating area is important; make sure it's a warm hue and is a similar brightness to your indoor lighting. To create even more ambience, consider using an accent light to highlight landscaping, trees, a fountain or the architecture of your home.

Lamps and chandeliers specifically made for outdoor use are becoming a popular decorative accent to outdoor porches, pools, cabanas and other covered outdoor spaces.

---

# EXTERIOR LIGHTING

If your home speaks for you, what is it saying to the outside world? Does it extend a warm welcome or barely merit notice? Does it disappear at night or exude the glow of safety and security?

Exterior lighting from Park Harbor helps you create a statement that sets your home apart with solutions that enhance its architecture and add vital safety features. From porch and entryway lighting that tells a design story at any time of day, to fixtures that illuminate your yard, you'll find a wide selection offering versatility and efficiency.

Park Harbor helps expand your home's living space with outdoor lighting solutions that make patios, porches and decks more inviting. Your reputation as a gracious host can also be expanded – welcome guests with lighting that brightens the night and creates added security.

# SIZING RECOMMENDATIONS EXTERIOR LIGHTING

## FOR ONE LANTERN:

If you place a lantern on only one side of the door, it should measure no more than 33% the height of the door. The center of the bulb should rest 66" above the threshold of the door.

For example, if the door is 84" (7') high, then the fixture should be no more than 28" high ( $84" \times 0.33 = 28"$ ).

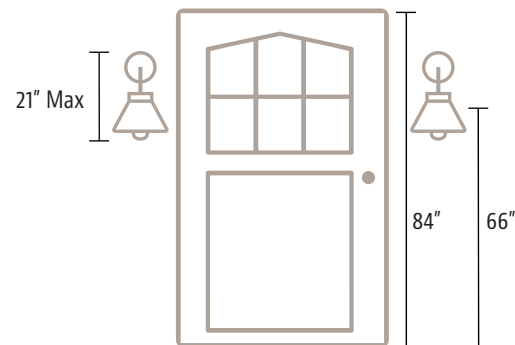

## FOR TWO LANTERNS:

When two lanterns are used, they should each measure approximately 25% the height of the door. This should be the maximum height. The center of the bulb should rest 66" above the threshold of the door.

For example, if the door is 84" (7') high, then the fixture should be approximately 21" high ( $84" \times 0.25 = 21"$ ).

Minimum height for one and two lanterns should be approximately 20% of the height of the door ( $84" \times 0.20 = 17"$ ).
